Health Information Technology

## **Traveling Wilburys – Continuous Care DIRECT from Wine Country**

### **HealthBridge**

During this demonstration, HealthBridge and Redwood MedNet will show how continuity of care for patients can be enhanced using the Direct platform to share healthcare information between two operational health information exchanges. In this scenario, the Wilburys of Cincinnati go on vacation in the Wine Country of California. When the Wilburys have to visit a health care provider, Direct connectivity allows HealthBridge and Redwood MedNet to exchange health information seamlessly and securely between the treating physician in California and the primary care physician in Cincinnati.
