

The Office of the National Coordinator for  
Health Information Technology

## **Authorized Release of Information to a Trusted Entity**

**Kaiser Permanente, MedVirginia  
and Social Security Administration**

The demonstration will show how the Social Security Administration requests information from medical providers (Kaiser Permanente and MedVirginia) based on authorization to release information and receives the information using the Nationwide Health Information Network. The information flow is seamless and does not require any human intervention. This exchange of information dramatically reduces the time required for the exchange compared to the traditional process.
